3-2- DFW POPULATION GROWTH 2010-2017

The map illustrates population change for DFW census tracts between 2010 and 2017. It shows where DFW is growing and shrinking. On the map, darker oranges mean that there was more growth and darker blues suggest that there was a decline. The population change is calculated by subtracting the 2010 population from the 2017 population and dividing that number by the 2010 value. It is shown in percentage, which is easier to interpret.

The tabular data of the 2010 & 2017 population is attained from the U.S. census website. The overlay of map 3-2 onto map 3-1 shows the spatial relationship between population change and the population density.
